Applicants' arguments in the Remarks filed on 03/09/2009 have been fully considered but they are not persuasive.

Applicants' arguments:

- a) Berstis does not teach or suggest "a processing section for processing to read out, when a device inherent password inherent to the machine tool program unauthorized-use preventing device and set by a manufacturer of the machine tool program unauthorized use preventing device is input;" and "when a machine tool inherent password different from said device inherent password, inherent to the machine tool, into which the machine tool program unauthorized-use preventing device is installed, and set by a manufacturer of the machine tool."
- b) "Berstis is directed to a multi-user video hard disk recorder, but Paniwani is directed to a communication system including a mobile station. Therefore, there is no motivation for one of ordinary skill in the art to modify the references to achieve the claimed combinations. Thus, the Office Action does not clearly articulate a reason why."
- c) "[N]either Berstis, nor Arnold, nor any combination thereof, teaches 'a processing section for processing to read out, when a device inherent password inherent to the machine tool program unauthorized-use preventing device and set by a manufacturer of the machine tool program unauthorized use preventing device is input, ... when a machine tool inherent password different from said device inherent password, inherent to the machine tool, into which the machine tool program unauthorized-use preventing device is installed, and set by a manufacturer of the machine tool."
- d) "[T]here is no motivation for one of ordinary skill in the art to modify the references to achieve the claimed combinations. Thus, the Office Action does not clearly articulate a reason why the prior art would have rendered the claimed invention obvious to one of ordinary skill in the art. Accordingly, no prima facie case of obviousness has been established. The 35 U.S.C. § 103(a) rejection of claims 4 and 5 is improper and should be withdrawn."

The Examiner disagrees for the following reasons:

Per a) Berstis does teach a processing section (Fig. 1A; data processing unit 102) for processing to read out (col. 3, lines 31-32; graphical information is displayed on screen 105), when a device inherent password [master user password] inherent to the machine tool program unauthorized-use preventing device and set by a manufacturer of the machine tool program unauthorized use preventing device (col. 7, lines 43-49; the master user enters the new user's name and selects a password for the new user (step 316); rather than setting a password, a variety of security controls may be used for each user in the system; these security controls may be include a smart card for each user, or some other type of security mechanism) is input (Fig. 3, items 302 and 304; col. 7, lines 14-16);" and "when a machine tool inherent password [user password] different from said device inherent password, inherent to the machine tool, into which the machine tool program unauthorized-use preventing device is installed, and set by a manufacturer of the machine tool (col. 7, lines 43-49; the master user enters the new user's name and selects a password for the new user (step 316); rather than setting a password, a variety of security controls may be used for each user in the system; these security controls may be include a smart card for each user, or some other type of security mechanism).

Per b) It has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See In re Oetiker, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, the data processing unit meets the "machine tools" & "machine tool programs" and its recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Regarding the motivation to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Berstis with the teachings of Panjwani for the purpose of preventing modification and protecting data between two parties.

Per c) Please refer to arguments addressed in section a) above.

Per d) In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, it would be obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Arnold with the teachings of Berstis to validate external data usable by said security device for the purpose of using authenticate data proved on an external medium.
